About Aria's UPS Worldship Integration Tools?

If you ship your products through the United Parcel Service (UPS) Worldship, Aria now enables you to integrate Aria 2.7 with your UPS Online software. This will help you maintain your shipment information efficiently and compute accurate freight costs on shipped cartons based on the upto-the-minute UPS shipping rates.

The UPS Integration tools - when installed – will help you:

First, generate a shipment file that contains detailed picking tickets information.

Second, export this file to the UPS system – which will assess the received picking ticket information and – in its turn – will send the UPS tracking numbers and the calculated freights back to Aria to be invoiced. At any time, you can access the received UPS shipment and freight costs through Aria; you don't need to go to the UPS machine every time you want this information.

The UPS Integration tools are:

The Export Shipment to UPS program

Use the filtering options on the Export Shipment to UPS program to select the pick tickets which you want to export to the UPS system. You can filter the picking tickets by picking ticket number, customer code, sales order number, location, entering date, etc. When you make your selection, click "Run" to generate the picking tickets information file and export it into your UPS System. The file provides UPS with the information required for freight costing and shipment, i.e. the shipping address, the area zip code, etc.

Select the picking tickets which you want to ship.

Export Shipment To UPS

Settings :

Default

Only Unshipped P.T.	is	No
Entered Date	is between	Between
Pick ticket #	is in list	In List
Account Code	is in list	In List
Order #	is	In List
Location	Is	In List

Option   Advanced   **Run**   **Reset**

Preview   **Save...**   Delete Setting   **Close**
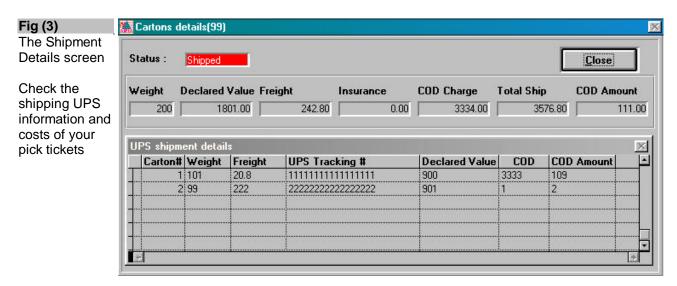

The Import UPS Shipments program

After you export the picking tickets information file to the UPS software, and process the shipment data in your UPS as you normally do, the UPS will generate the shipment information file that contains the UPS tracking numbers and the freight cost per carton. To import this file into Aria, use the Import UPS Shipment screen. Just browse and select the file path, and click Proceed. The screen will import the file under your Aria files after it validates the file structure.

Import the UPS shipment information to Aria

Import UPS Shipments

Import UPS Shipments Path:

File Name : [   ] [....]

Proceed   Cancel

Having this information in Aria is a good time and effort saver; you don't need to go every now and then to the UPS machine to get whatever shipment information required by your customers; now you will find this information inside your system, and you can access it through the new Shipment Details screen as described in the following section.

View UPS Shipment Information through Aria

At any time, you can access the UPS shipment information that was imported into Aria. To do this, open the pick ticket and then open the new Shipment Information screen. The screen shows the pick ticket shipping status, i.e. Pending or Shipped, and the shipped cartons on this pick ticket together with the UPS freight information, i.e. the carton weight, carton freight cost, UPS Tracking number, COD amount, etc.

Features of Integrating Aria with the UPS

1. Better utilization of your UPS software.

2. Faster and more accurate maintenance of shipment information and freight costs.

3. Accurate UPS Tracking numbers and Freight charges in Aria available for invoicing.

4. Improve customer satisfaction by providing them with instant shipping information.

5. Avoid added costs of reshipping due to common mistakes in shipping addresses and shipment information.
